PlanetPress Suite Training – Course Overview

Module 1: PlanetPress Suite Presentation & Data Processing

The goal of this first module is to develop a level of comfort with the design tool to:

- **understand the role played by each PlanetPress Suite component**
- **be able to install or update any PlanetPress Suite component**
- **customize the PlanetPress Design user interface, so as to make a more natural environment for creating variable data documents**

Module 2: PlanetPress Design Objects

Learn to control and properly print data, as well learn to create PlanetPress Design documents that truly enhance corporate image.

Module 3: Using images in PlanetPress Design

Without a solid understanding of image files and formats, production level printing can severely slow down even high speed production printers. This module shows the multiple ways of printing images and their respective implications to best optimize the speed of the output.

Module 4: PlanetPress Design Conditions

The primary goal of this module is to provide the basic understanding of logical conditions with PlanetPress Design. This module is comprised mostly of lab exercises, but also includes a mandatory Webinar and Quiz. The lab exercises require investigation, and experimentation to discover the basics in order to resolve scenarios that were developed to foster an understanding of the power of conditions in PlanetPress Design.
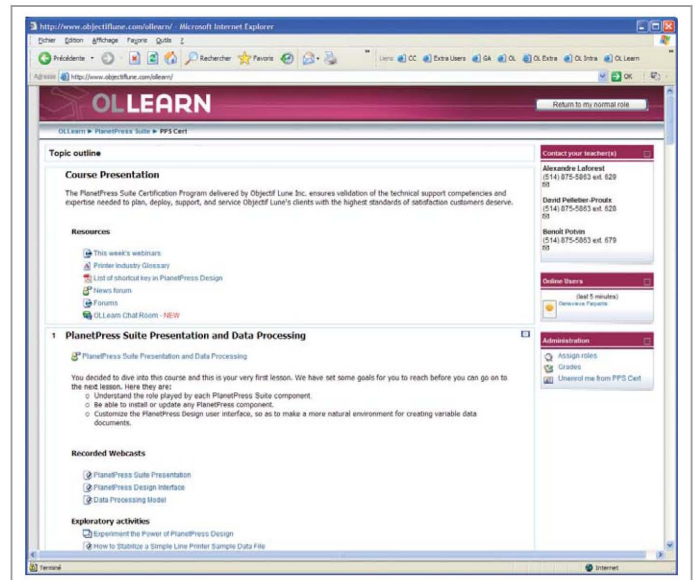

Module 5: Controlling Page Execution in PlanetPress Suite

Learn multiple ways to interact with the printer. In depth coverage of page execution, page types, subset stapling, jogging, duplexing, selecting different pages from input trays, and outputting some pages in specific bins.

Module 6: PlanetPress Design Document Implementation

Learn everything you need to know about the various options to implement a PlanetPress Design document in different environments. Become familiar with data capture and trigger implementation.

> **Course Presentation**

Module 7: PlanetPress Server/PlanetPress Watch First Steps

With a solid base of knowledge of PlanetPress Design, this module provides an overview of PlanetPress Server and PlanetPress Watch through exploratory exercises and online webinars including configuration of inputs and outputs.

Module 8: PlanetPress Server/PlanetPress Watch Flow Control

This module allows for a deeper interaction and understanding of the data using the tools provided with the software focusing on workflow automation for email, fax and archiving utilizing PlanetPress Imaging.
