LOQATE GLOBAL KNOWLEDGE REPOSITORY

The Loqate Global Knowledge Repository (LGKR) contains reference data relating to postal addresses and other geographic points of interest for all 240+ populated countries and territories of the world.

The LGKR is used in conjunction with all other Loqate solutions and is the only reference database of its type with complete global coverage. Some data is proprietary to Loqate and other data comes directly from entities around the world and is licensed for use within the Loqate solutions.

These sources include, but are not limited to, postal authorities, GIS data, utility company data and other validated sources.

Once address or point of interest data has been identified or entered into a Loqate solution, this data can be compared against the definitive reference data contained within the LGKR to ensure it is accurate and complete. Spellings can be corrected, additional data such as locality, administrative area or postcode can be corrected or added, and the data can be enriched with other elements such as latitude-longitude coordinate.

Contained in the LGKR are millions of entries of buildings, streets, localities, administrative areas, postal codes, geocodes and other data of geographic significance. Additionally, it contains all of the various processing rules which enable Loqate software to Identify, Search, Verify and Geocode data from around the world.

The Loqate Global Knowledge Repository contains literally millions and millions of reference data entries
